Department of Computer Science & Engineering

Abstract

A library management system is an effort to Digitize Library Operations in an Educational Institution; and this is a web application designed to manage all the functions of a library. It helps librarian to maintain the database of new books, books borrowed by members along with their due dates, maintain library records, track the number of books in the library, how many books are issued, or how many books have been returned or renewed or late fine charges, etc Librarian can even search for books, issue / reissue books, and manage all the data efficiently and orderly. The purpose of a library management system is to provide instant and accurate data wrt any type of book, borrowers, users and related and thus digitizing the Educational World

Introduction

Objective: Effectively Access, Manage, Track, and Perform Daily Library Operations with Ease

Scope of the work and its importance: This is our first software development project – Thanks PESU very much for providing us this great opportunity; and this time, we have planned and developed a library management web application to help digitize the “Operations of Library” with all the basic as well as some innovative features for managing a library end to end. This includes a database of various books available in the library. It also lists various books issued to respective readers. The application keeps track of all the books readily available and also the books those have been issued to various lenders for the time period. Readers usually tend to forget the date to return their library books, so this application alerts them & even calculates fine depending on the expiry date. Thus, this digital library management system provides enhanced library functionalities for the modern world with alerts, reminders, notifications and related intelligence

Features of the Application: -

- **Librarian login:** The system will be under sole control of the Librarian. Librarian can add or remove books from the system and also maintains records of the book available and issued in the library. The Librarian can even update the books details if required.
- **Dashboard View:** Librarian will have a single place (a Dashboard or a Landing page) where he / she can manage various operations (like Manage Books, Borrowers, Users); and also, he / she will be notified about the books due (as a proactive Notification on Dashboard Page)
- **Manage Borrower:** Librarian as an Admin can manage Borrowers (Add, Delete, Update, View), and also manage issuance of the Books to Users
- **Manage Books:** Librarian as an Admin can manage Books (Add, Delete, Update, View), and also use Search features to manage the dependencies

PES UNIVERSITY

(Established under Karnataka Act No. 16 of 2013)

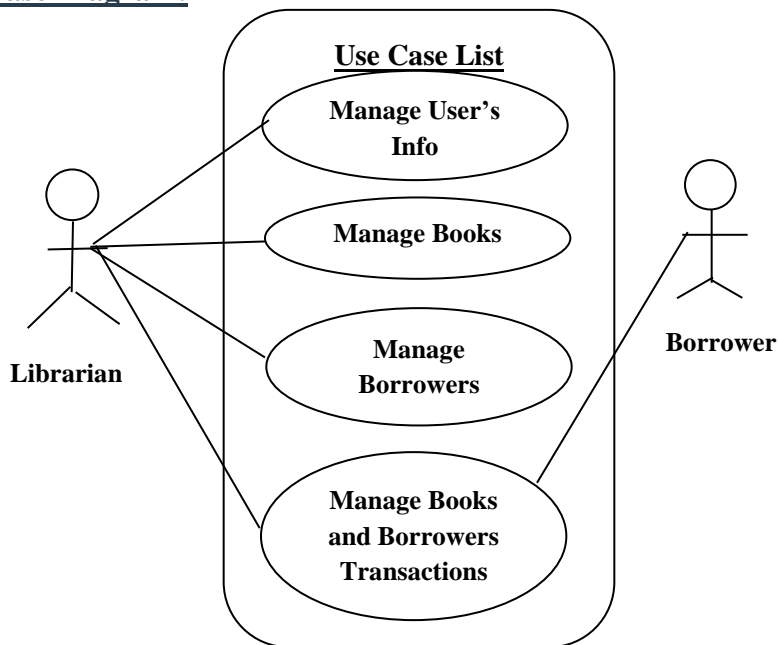

100 Feet Ring Road, BSK III Stage, Bengaluru-560 085

Department of Computer Science & Engineering

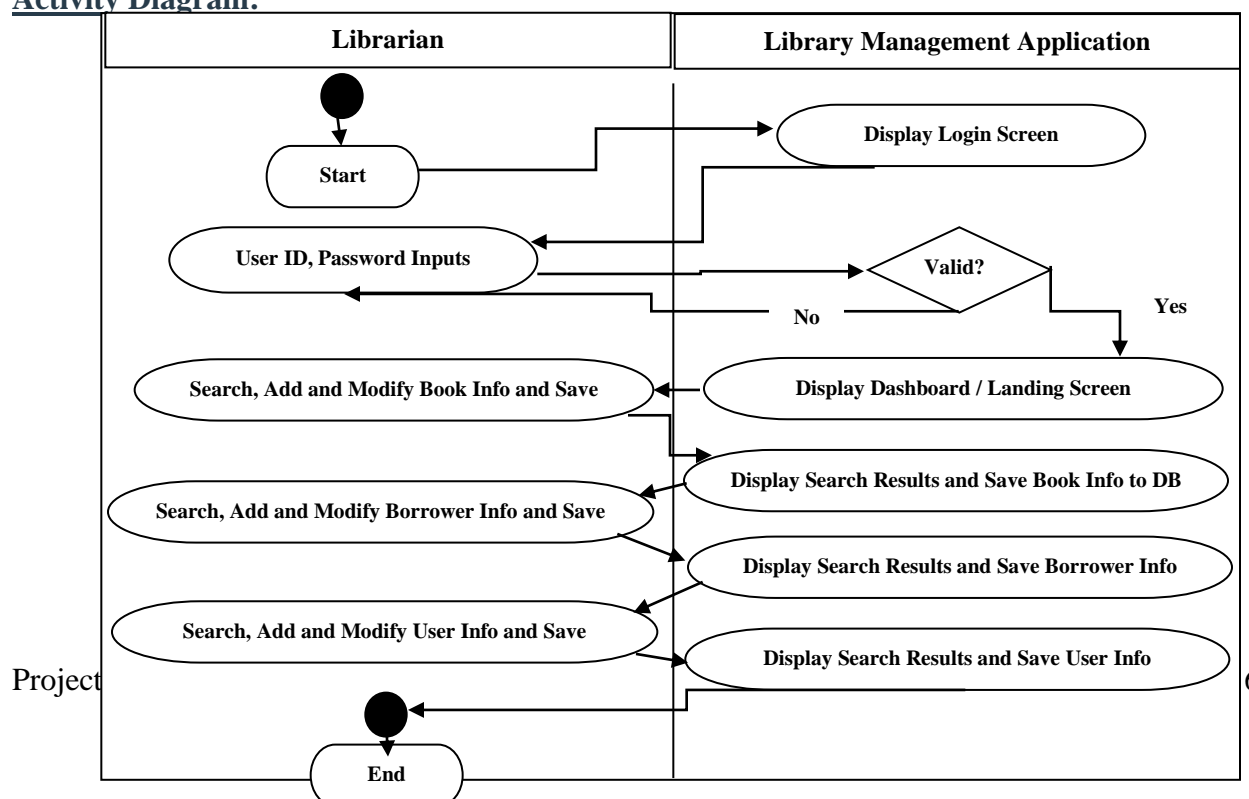

- **Tracking the Book / Borrower Movements:** The application can track the period for which the book has been issued to user and calculates fine if the book is not returned on time. application has intelligence to notify the Librarian on the pending borrowers with due date (Alert on Dashboard)
- **View date info:** The Librarian can search and view the date when he / she has issued the book as well as the expiry date; and can view fine to be paid that is calculated by the system
- **Calculate Fine:** The student can view the issue and expiry date for the book issued and can even calculate fine

Design: We have followed Unified Modeling Language (UML) Approach for Design; and have created various UML Diagrams (like Use Case Diagram, Activity Diagram, ER Diagram)

Use Case Diagram:

Activity Diagram:

Implementation: we have used Python as language for Coding; and our source code crosses 2000+ Lines of Code (across all the application code project files) – and hence we will be embedding snippets of Code below; and complete source code has been checked-into GITHUB Repository and link has been provisioned below

Below are the **Project Files**: there are 14 Project Files created; 12 User Interface (UI) Screens created; and few External Libraries used

Project
Files

Entire source code has been checked-in and version controlled in GITHUB @ <https://github.com/SowmeshSharma0411/CSProject.git> ; below are the major Project Files:

- **main.py** – which does function call to all other python files
- **AddBook.py** – Contains Logic to add the book
- **ViewBooks.py** – To View the list of books in the library
- **DeleteBook.py** – To Delete a book from library
- **ReturnBook.py** – To Return a book to the library
- **ViewBorrowers.py** – To View & Manage the Borrowers and their details
- **SearchFunction.py** – a common reusable function used across various pages
- **ManageUsers.py** – to manage users if the web application
- **Auth.py and MainAuth.py** – used for authentication & authorization
- **Fines.py** – to manage Fines for the Books which are past-due

Testing:

Test Strategy: We have planned for Manual Functional Testing and Integration Testing for now; and for later stages (once we develop the complete Application full-fledge) – we intend to bring-in Non-Functional Requirement (NFR) Test Strategies like Security, Performance Testing

Manual Test cases have been created as below:

Test Case #	Test Case Description	Expected Response	Test Results / Comments
Func0001	Key-in UserID and Password and click on Login (correct UserID and Password)	User should be able to login and user is presented with a Dashboard / Landing Page with Functionalities to click (Features are: Manage Books, Manage Borrowers, Manage Users, Quit and Alert with # of users delayed returning Books with due date)	
Func0002	Key-in UserID and Password and click on Login (incorrect UserID and Password)	Application will throw an error message and NOT login the user to web Application	
Func0003	User's Dashboard with functionalities for Librarian to manage Books / Manage Borrowers	Librarian / User is presented with a Dashboard / Landing Page with Functionalities enabled & to click (Manage Books, Manage Borrowers, Manage Users, Quit and Alert with # of users delayed returning Books with due date)	
Func0004	User clicks on Manage Books in Dashboard Screen	User should be presented with a Manage Books web page with features like View Books, Add Books, Edit Books, Delete Books, and Quit	
Func0005	User clicks on View Books in Manage Books Screen	User should be presented with a View Books web page with search facilities to search Books by various parameters like Book Name, Author, etc., etc.	
Func0006	User clicks on Add Books in Manage Books Screen	User should be presented with a Add Books web page with fields to add details for a new book like Book Name, Author, Category, Department and Related Details; then Buttons to click on save - to Save data to Database and Quit the webpage	
Func0007	User clicks on Edit Books in Manage Books Screen	User should be presented with an Edit Books web page with fields to edit details for a new book like Book Name, Author, Category, Department and Related Details; then Buttons to click on save - to Save data to Database and Quit the webpage	
Func0008	User clicks on Delete Books in Manage Books Screen	User should be presented with a Delete Books web page to delete record from DB	
Func0009	User clicks on Manage Borrowers in Dashboard Screen	User should be presented with a Manage Borrowers web page with features like View Borrowers, Add Borrowers, Edit Borrowers, Delete Borrowers, and Quit	

Func00010	User clicks on View Borrowers in Manage Borrowers Screen	User should be presented with a View Borrowers web page with search facilities to search Borrowers by various parameters like Borrowers First Name, Borrowers Last Name, etc., etc.	
Func00011	User clicks on Add Books in Manage Borrowers Screen	User should be presented with a Add Borrowers web page with fields to add details for a new Borrowers like Borrowers Name, and Related Details; then Buttons to click on save - to Save data to Database and Quit the webpage	
Func00012	User clicks on Edit Borrowers in Manage Borrowers Screen	User should be presented with an Edit Borrowers web page with fields to edit details for an existing Borrowers like Borrowers Name, and Related Details; then Buttons to click on save - to Save data to Database and Quit the webpage	
Func00013	User clicks on Manage Users in Dashboard Screen	User should be presented with a Manage Users web page with features like View Users, Add Users, Edit Users, Delete Users, and Quit	
Func00014	User clicks on View Users in Manage Users Screen	User should be presented with a View Users web page with search facilities to search Users by various parameters like First Name, Last Name, etc., etc.	
Func00015	User clicks on Add Users in Manage Users Screen	User should be presented with a Add Users web page with fields to add details for a new Users like First Name and Related Details; then Buttons to click on save - to Save data to Database and Quit the webpage	
Func00016	User clicks on Edit Users in Manage Books Users	User should be presented with an Edit Users web page with fields to edit details for an existing Users like First Name and Related Details; then Buttons to click on save - to Save data to Database and Quit the webpage	
Func00017	User clicks on Delete Users in Manage Users Screen	User should be presented with a Delete Users web page to delete record from DB	
Func00018	User clicks on Quit button to quit any screen and also logout of Application	User should be able to click on Quit button on each screen to take him / her back-to Dashboard Page; and when suer clicks on Quit on Dashboard Page will be logged out of the Application

Conclusions & future enhancements

Conclusion:

A library management system is a web application designed to Digitize and Manage all the functions of a library end-to-end; This system can be used in public libraries; It can also be implemented in the library of schools, colleges, institutes, and organizations

We are Thankful to PESU to have provided this opportunity to venture into and create a full-fledged Web Application which was a very good start (Shree Ganesh) for us to do hands-on coding and also learn a lot along-the-way; We have envisioned much more user intuitive features to be added / enhanced to this web application (outlined in below-section) which we will take it up later

Future Enhancements: below are the list of Enhancements / Improvisations planned:

- Improve User Experience by making the web application with Responsive Web Page Design
- Enhance the Web Application to support Mobile Screens
- If possible, make it Android or iOS Enabled
- Enhance features to include:
 - Better full-fledged Authentication & Authorization for user; and also encrypting / decrypting the Password (For Security)
 - Add feature for Students to use this Application (now we have implemented for Librarian only)
 - Further Intelligence (like automated reminders, trigger notifications to defaulters)
 - Add Reporting features, with customizable Report Templates
 - Add Alerts (like SMS) and Notifications (like email)
 - Add / Enable feature for Subscriptions; notify students when new Books arrive
 - Code provisions for e-Books (reading & management) within the Application
- Bring-in other Test Strategies for Non-Functional Requirements like Security Testing, Performance Testing

PES UNIVERSITY

(Established under Karnataka Act No. 16 of 2013)
